Nuvepro to train over one lakh professionals in generative AI

INTERVIEWS

Bridging the Tech Skills Gap: The Founding Vision Behind Nuvepro

 CXOtoday News Desk 3 weeks ago

Nuvepro to train around 1 lakh software professionals in Gen AI skills, has trained 1000 in the last two months

Nuvepro's GenAI upskilling solutions also provide a unique, safe learning environment, and we aim to offer these solutions to enterprises globally to enable upskilling for their workforce," said Nuvepro's CTO, Moyukh Goswami.

MORE THAN 80% OF OUR GEN AI WORKSHOP PARTICIPANTS AGREE: THIS IS THE BEST PROJECT / JOB READINESS SOLUTION

Our GenAI hands on workshop provided participants with deep insights and practical skills using cutting-edge tools like CodeWhisperer within the Q Developer platform. Hands-on learning is essential for mastering new technologies, and our approach placed a strong emphasis on this. Throughout the workshop, we conducted polls to understand participants' needs better, and the results were telling. A remarkable 83% of attendees reported high satisfaction with the hands-on learning approach, noting it prepared them for real-world projects and enhanced their job readiness. Many started with limited exposure to GenAI CodeWhisperer, but through our hands-on GenAI workshop, they built robust skills and confidence.

The focus on practical learning wasn't just about building a product—it was about equipping participants to handle real-world challenges. As GenAI continues to embed itself in the tech industry, the demand for professionals skilled in this area is rapidly increasing.

GenAI Sandboxes for AWS bedrock and Q developer: Safe Spaces to Experiment -

GenAI sandboxes create a safe, isolated environment where learners can experiment with different models, test various hypotheses, and explore new techniques. This approach ensures that participants can make mistakes and learn from them without the risk of affecting live systems or incurring unexpected costs.

The importance of a sandbox environment cannot be overstated. It allows learners to:

- **Explore Freely:** Try out different models and approaches without the fear of making critical errors.
- **Refine Skills:** Continuously improve by experimenting with new techniques and methodologies.
- **Build Confidence:** Gain the confidence needed to apply their technical skills in real-world scenarios.

GIRIDHAR LV

NUVEPRO AS A PART OF UPEKKHA'S ACCELERATOR PROGRAM

Nuvepro became part of the Upekkha B2B accelerator in 2023 as part of their Spring Batch. Upekkha is the Y Combinator equivalent for India, focusing only on startups that develop software for Businesses. When we joined last year, SaaS was the hottest thing in Software, but all of that has completely changed with AI.

Upekkha selected about 10 startups to be part of an AI immersion trip to the Valley area. The aim was to give these startups a real view of the AI action. Nuvepro was one of the selected startups.

GIRIDHAR LV

NUVEPRO AS A PART OF UPEKKHA'S ACCELERATOR PROGRAM

Here are a few quick notes of the Immersion week:

- Creation of foundational models requires a lot of computing – as about 350000 H100s in the case of Meta. This is a lot of investment and only a handful of companies can do this kind of investment.
- With AI, new billing models are being discussed. The per-seat SaaS billing model is under threat, and outcome-based billing models enabled by AI are the way forward.
- Like vertical SaaS, vertical AI is the place of tremendous opportunity.
- The world spends almost \$300 B on SaaS software and \$1.4 T in Software services – this is the target market for AI companies.
- The US is and will continue to be the largest software market. Building in India and selling to the US market is a successful market motion for almost every startup that has crossed \$10 M in annual revenues.
- The pace of dispersion of AI technologies is fast, companies in India or globally are almost in lock step in getting access to the same technologies that startups in the US get access to. However, the key to a large success is to build software that addresses the needs of the US market.
- Gen AI and Gen AI-enabled upskilling is the new direction for upskilling, and we expect this market to be relevant for many years to come.

UPCOMING AT NUVEPRO

REGISTER FOR OUR HIGHLY
ANTICIPATED GENAI E-
WORKSHOP (IN ASSOCIATION
WITH AWS) THAT'S
TRANSFORMING ENTERPRISES!
- DEVELOP A PERSONALIZED
MULTIMODAL RAG
APPLICATION.
